

Analyzing Lean Metrics– After mapping out my value stream, look at my estimated Cycle Time and Flow Time. Evening Routine– 1 hour 20 minutes Chores– 2 hours 20 minutes. Night prep– 3 hours 55 minutes. Estimated Cycle Time– 6 hours 35 minutes.

Optimize My Processes– Now to use this information to optimize my Evening Routine. Eliminating Waste– Depending on the time I get off of work, it takes 30–45 minutes to get home, sometimes 1 hour. I can save 15 minutes by taking back roads home. I can save 15–20 minutes pulling out the ingredients for dinner by leaving it out before I go into work, or having a plan on what exactly I'm cooking beforehand. If I marinate the meat the night before, or do more crockpots I could potentially save 20 minutes to 1 hour. Sometimes I cut my daughter's bath time short to save time as well, 10 minutes.
